

Effortlessly Sell  
Downloadable Media  
and Physical Goods.

Savtira has developed the world's most advanced eCommerce platform for Enterprise clients allowing them to sell both digital and physical goods from a fully integrated system. As opposed to a traditional eCommerce system built on legacy technology, Savtira's eCommerce platform has been developed using the newest technology, allowing for improved performance, capacity, and a feature set possible only on our cloud-based eCommerce platform.

### Unified Shopping Cart

In a sea of shopping cart software solutions, Savtira has established itself as an industry leader by developing a system that not only processes digital and physical goods, but also rentals, auctions, and subscriptions. When attached to our massive catalog and Entertainment Distribution Network, Savtira's Unified Shopping Cart is in a league all its own.

### Device Agnostic

Imagine an eCommerce solution that functions properly on all internet-connected devices regardless of make, model, operating system, or service provider. Savtira has developed a completely device-agnostic solution that provides all online shoppers the eCommerce experience they want regardless of how they are connecting to the Internet.

### Complete Customization

Your brand is unique and your eCommerce solution needs to reflect the identity you've established. Savtira's eCommerce platform is completely white-labeled and built specific to your brand guidelines and system requirements. This is not a "powered by" or template adaptation, this is a completely custom solution for your eCommerce needs.

### Web 3.0

In today's fast-paced, connected age, the necessity exists for modern eCommerce technology to perform reliably in concert with social and mobile media platforms. To provide its clients with the eCommerce platform they need, Savtira has developed its technology to be Web 3.0-friendly.
